Background:	This gene encodes a mitochondrial protein similar to yea st ABC1, which functions in an electron-transferring mem brane protein complex in the respiratory chain. It is not related to the family of ABC transporter proteins. Expres sion of this gene is induced by the tumor suppressor p5 3 and in response to DNA damage, and inhibiting its ex pression partially suppresses p53-induced apoptosis. Alte rnatively spliced transcript variants have been found; ho wever, their full-length nature has not been determined.
