## 技术规格

<b>Background:</b>	This gene encodes a transmembrane protein which contains three extracellular CUB domains and acts as a substrate for Src family kinases. The protein plays a role in the tyrosine phosphorylation-dependent regulation of cellular events that are involved in tumor invasion and metastasis. Alternative splicing results in multiple transcript variants of this gene.
<b>Applications:</b>	ELISA, WB, IHC
<b>Name of antibody:</b>	CDCP1
<b>Immunogen:</b>	Synthetic peptide of human CDCP1
<b>Full name:</b>	CUB domain containing protein 1
