技术规格

Background:	This gene encodes a member of the voltage-
	dependent anion channel pore-forming family
	of proteins that are considered the main path
	way for metabolite diffusion across the mitoc
	hondrial outer membrane. The encoded protei
	n is also thought to be involved in the mitoc
	hondrial apoptotic pathway via regulation of
	BCL2-antagonist/killer 1 protein activity. Pseud
	ogenes have been identified on chromosomes
	1, 2, 12 and 21, and alternative splicing result
	s in multiple transcript variants.
Applications:	ELISA, IHC
