技术规格

Background:	This gene is a member of the insulin-like growth factor binding protein (IGFBP) family and encodes a protein with an IGFBP domain and a thyroglobulin type-I domain. The protein forms a ternary complex with insulin-like growth factor acid-labile subunit (IGFALS) and either insulin-like growth factor (IGF) I or II. In this form, it circulates in the plasma, prolonging the half-life of IGFs and altering their interaction with cell surface receptors.
Applications:	WB
Name of antibody:	IGFBP3(Phospho-Ser183)
Immunogen:	Peptide sequence around phosphorylation site of serine 183(K-D-S(p)-Q-R) derived from Human IGFBP-3 .

Full name:	insulin-like growth factor binding protein 3
Synonyms :	insulin-like growth factor binding protein 3
SwissProt:	P17936
WB Predicted band size:	32 kDa
WB Positive control:	Rat brain tissue lysates
WB Recommended dilution:	500-1000
