技术规格

Background:	The protein encoded by this gene belongs to the CSRN P family of nuclear proteins that share conserved region s, including cysteine- and serine- rich regions, a basic d omain, a transcriptional activation domain, and bind the sequence 'AGAGTG', thus have the hallmark of transcript ion factors. Studies in mice suggest that these genes m ay have redundant functions. Alternatively spliced transcr ipt variants have been found for this gene.
Applications:	WB
Name of antibody:	CSRNP2
Immunogen:	Synthesized peptide derived from internal of human TAI P-12.
Full name:	cysteine-serine-rich nuclear protein 2
