技术规格

Background:	This gene encodes a member of the serine/threonine protein kinase family. The encoded protein, a component of a cytokine-activated protein complex that is an inhibitor of the essential transcription factor NF-kappa-B complex, phosphorylates sites that trigger the degradation of the inhibitor via the ubiquination pathway, thereby activating the transcription factor.
Applications:	WB
Name of antibody:	CHUK(Phospho-Ser180/181)
Immunogen:	Peptide sequence around phosphorylation site of serine 180/181 (C-T-S(p)-F-V) derived from Human IKK-alpha/ beta

	ta.
Full name:	conserved helix-loop-helix ubiquitous kinase
Synonyms :	IKK1; IKKA; IKBKA; TCF16; NFKBIKA; IKK-alpha
SwissProt:	O15111
WB Predicted band size:	85 kDa
WB Positive control:	HepG2 cells lysates treated with TNF
WB Recommended dilution:	500-1000
